Assignment 02: Written Questions

Name:

Due September 23rd, in class

Degree-2 Bezier Curve

In class, we derived the Bezier curve for cubic interpolation. For this question, derive the Bezier curve for a degree-2 polynomial.

In class, we saw that the formula for a nth-degree Bezier curve is

$$p(t) = \sum_{i=0}^{n} B_i^n(t)b_i$$

1) Derive is the polynomial for a degree-2 Bezier curve

2) How many control points does a degree-2 Bezier curve need?

3) How can we use de Casteljau's algorithm to interpolate using a degree-2 Bezier curve?

4) Show that de Casteljau's algorithm reduces to the same equation as the degree-2 Bezier Curve.
